

All Products for Commercial & Industrial Applications

ACME ENGINEERING & MANUFACTURING CORP.

P.O. Box 978 • Muskogee, OK 74402 • 918/682-7791
Fax 918/682-0134 • www.acmefan.com

acmefan.com

ACME warrants its equipment to be free from defects in materials and workmanship for a period of **two years** from the date of shipment on all equipment*. Refer to form MS149 for complete limited warranty terms and conditions. This form is available to anyone at www.acmefan.com.

*The comprehensive warranty applies to all equipment except for belts which are warranted up to 1 year from the ship date and Polyethylene tubing which is warranted up to 90 days from the ship date.

ACME offers a 5 year warranty on the **ACME Duplex Split Pillow Block** shaft and bearing assembly. These exceptional bearings are resiliently mounted in neoprene rings and permanently lubricated in a duplex split pillow block housing. Acme D. S. Pillow Block Bearings require no periodic servicing resulting in reduced down time and more savings.

U.L. 705 Listed

U.L. 705 requirements cover roof and wall-mounted power ventilators as well as straight-through duct fans as intended for commercial or industrial use and for connection to permanently installed wiring systems in accordance with the National Electrical Code, NFPA 70, for the United States.

U.L. 705 Listed

C.U.L./U.S. 705 requirements cover roof and wall-mounted power ventilators as well as straight-through duct fans as intended for commercial or industrial use and for connection to permanently installed wiring systems in accordance with the National Electrical Code, NFPA 70, for the United States and Canada.

U.L. 762 Listed

U.L. 762 requirements cover products listed to operate continuously at elevated temperatures and continue operation during grease flare-up. These units are intended for installation in accordance with the National Fire Protection Association (NFPA) Standard 96: Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations, for the United States.

Power Ventilators for Smoke Control Systems

Power Ventilators for Smoke Control Systems covers products intended for installation in buildings in accordance with ANSI/NFPA 92A, "Smoke-Control Systems Utilizing Barriers and Pressure Differences," and ANSI/NFPA 92B, "Smoke Management Systems in Malls, Atria, and Large Spaces" for the United States. These ventilators have been investigated with respect to their operation during exposure to elevated temperatures and have been marked on the product and indicated in the individual certifications.

MIAMI-DADE COUNTY
APPROVED

Miami-Dade certified products are tested for static and cyclic wind loading as well as missile impact and constructed to withstand wind loads specified by the 2010 Florida Building Code. Products certified by Miami-Dade do not require tie-downs but must be installed in accordance with the provided mounting instructions.

Meets 2009 IBC: Seismic

The 2009 International Building Code (2009 IBC) includes HVAC and fan standards for the design of non-structural components subject to seismic events, and they incorporate certification of the mechanical equipment itself. The Office of Statewide Health Planning and Development (OSHDP) enforces building standards per the California Building Code and reflects the standards of the 2009 IBC. THE OSHDP Special Seismic Certification Preapproval (OSP) accepts certification by way of shake table testing or through experience data.

AMCA International Licensed

This is a reference to the **AMCA licensed products** whose performance may be viewed with our website or full catalog.

Meet your energy savings requirements on direct driven products with the **ACME EC (electronically commutated)** Motors that maintain 85% efficiency even as the motor is slowed down. The brush-free, DC electronically commutated motors can be dialed down by 80%. An EC Motor converts AC power to DC for increased efficiencies and cooler temperatures at lower speeds.

This is an internationally recognized standard which designates that devices carrying the **Energy Star** service mark use less energy than required by federal standards.

This certification is recognized in both the United States and Canada and signifies that a product bearing the **ETL Listed** mark is determined to have met the minimum requirements of prescribed product safety standards.

This certification mark, as used by authorized persons, certifies that the goods conform to residential ventilating performance requirements pursuant to standards designated by the **Home Ventilating Institute**.

Centrifugal Utility Blower

3000 & 8100

QBR

QBRD

Belt drive 3000, 8100, and QBR and direct drive QBRD are utility sets designed for high efficiency and low sound output. 3000 and 8100 available in:

- Class 1 or Class 2
- Clockwise or Counterclockwise Rotation
- 7 discharge positions

QBR and QBRD available in:

- Clockwise or Counterclockwise Rotation
- 7 discharge positions

Upblast Propeller - Motor/Drives Out of Air Stream

UBGMX

Belt drive UBGMX is a high velocity exhauster designed to discharge air up and away from the building and features the motor/drives out of the airstream for ease of servicing and inspection.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	UBGMX	78,842	0.75"	24-72

UBGMX:

U.L. 705 Listed

AMCA International
Licensed

Upblast Tubeaxial: Steel or Alum - Motor/Drives Out of Air Stream

UBH & UBHA

Heavy duty steel construction UBH and heavy gauge aluminum construction UBHA are high velocity upblast discharge fans ideally suited for applications that require the motor, drives and bearings out of the airstream.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	UBH	61,236	1.25"	16-60
Belt	UBHA	41,580	1.00"	16-48

Gravity Intake/Relief Vent

LQV is a low silhouette, gravity intake/relief vent.

LQV

Model	Max CFM	Max Static Pressure	Model Sizes Available
LQV	17,300	0.25"	10-48

Gravity Relief Vent

EV is a low silhouette exhaust hood.

EV

Model	Max CFM	Max Static Pressure	Max Throat Size
EV	63,000	0.25"	144" x 188"

Gravity Louvered Relief Vent

LEV is a multi-tiered louvered exhaust hood.

LEV

Model	Max CFM	Max Static Pressure	Max Throat Size	Max Tiers
LEV	85,765	0.3"	88" x 144"	20

Upblast Relief Vent Butterfly Dampers

UBGEC is a heavy duty, curb-mounted, gravity relief or exhaust unit that utilizes butterfly dampers.

UBGEC

Model	Max CFM	Max Static Pressure	Model Sizes Available
UBGEC	56,548	0.25"	24-72

Roof Ventilation: Exhaust

Lab Exhaust Fans

Upblast Centrifugal Laboratory Exhaust

TIBLE

TIBLE is a belt drive, centrifugal laboratory exhauster constructed to operate in a roof mounted vertical position with optional bypass air dampers and plenum intended to dilute noxious fumes. Maximum inlet temperature: 200°F.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	TIBLE	17,500	5"	80-365

TIBLE:

U.L. 705 Listed

AMCA International
Licensed

Designed to meet:

- ANSI 29.5:
Laboratory
Ventilation
- NFPA 45:
Standard on fire
protection for
laboratories
using chemicals
- ASHRAE
Laboratory
Guidelines

Laboratory Exhaust Fan Without an Inlet Plenum Box and Dampers

Laboratory Exhaust Fan With Inlet Plenum Box and Isolation Damper

TIBLE FAN WITH ISOLATION DAMPER ONLY

Laboratory Exhaust Fan With an Inlet Plenum Box, a Bypass Control Damper and an Isolation Damper

BYPASS / CONTROL DAMPER

Roof Ventilation: Exhaust

Restaurant Fans

Upblast Centrifugal: Grease Rated UL 762

PNURG & PDURG

PNURG belt drive and PDURG direct drive fans are upblast, centrifugal power roof ventilators designed for exhausting grease laden air.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	PNURG	33,374	5"	80-490
Direct	PDURG	5,317	1.50"	80-200

PNURG & PDURG:

AMCA International
Licensed

Centrifugal Utility Blower: Grease Rated UL 762

8100 & QBR

Belt drive 8100 and QBR are utility sets designed for high efficiency and low sound output in applications with grease laden air.

8100 available in:

- Class 1 or Class 2
- Clockwise or Counterclockwise Rotation
- 7 discharge positions

QBR available in:

- Clockwise or Counterclockwise Rotation
- 7 discharge positions

8100 & QBR:

AMCA International
Licensed

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	8100C1	78,977	6.5"	8115-8154

Belt	QBR	23,230	3.5"	100-365

Roof Ventilation: Exhaust

Smoke Exhaust Fans

Upblast Centrifugal: UL Smoke Exhaust Rated

PNUSE

PNUSE belt drive fans are upblast, centrifugal power roof ventilators designed for emergency smoke exhaust applications.

UL smoke exhaust rated at 500°F for 4 & 8 hours, 630°F for 4 hours, and 1000°F for 15 & 25 minutes.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	PNUSE	33,374	5"	80-490

PNUSE:

**Power Ventilators
Smoke Control
Systems**

**AMCA International
Licensed**

Upblast Propeller: UL Smoke Exhaust Rated

UBGMXSE

UBGMXSE is a high velocity exhaust fan designed for emergency smoke exhaust applications and features the motor out of the airstream for ease of servicing and inspection.

UL smoke exhaust rated at 500°F for 4 hours and 1000°F for 15 minutes.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	UBGMXSE	78,842	0.75"	24-72

UBGMXSE:

**Power Ventilators for
Smoke Control
Systems**

**AMCA International
Licensed**

Upblast Tubeaxial: UL Smoke Exhaust Rated

UBHSE

Heavy duty steel construction UBHSE fans are high velocity upblast discharge fans with motors and drives located outside of the airstream and designed for emergency smoke exhaust applications.

UL smoke exhaust rated at 500°F for 4 hours, 630°F for 4 hours, 800°F for 4 hours and 1000°F for 15 minutes and 20 minutes.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	UBHSE	61,236	1.25"	16-60

UBHSE:

**Power Ventilators for
Smoke Control
Systems**

**AMCA International
Licensed**

Roof Ventilation: Exhaust

Hurricane Rated Fans

Downblast Centrifugal: Hurricane Rated

PVH & PVDH

PRNH

Belt drive PVH and direct drive PRNH and PVDH are downblast, centrifugal power roof ventilators designed for exhausting clean air in high wind and hurricane resistance applications.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	PVH	19,043	2"	75-365
Direct	PRNH	2,770	1"	60-171
Direct	PVDH	4,622	2.625"	120-165

PVH & PRNH:

AMCA International
Licensed

PRNH & PVDH

Upblast Centrifugal: Hurricane Rated

PNURFH & PDURFH

PNURFH belt drive and PDURFH direct drive fans are upblast, centrifugal power roof ventilators designed for exhausting clean air in high wind and hurricane resistance applications.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	PNURFH	14,622	5"	80-300
Direct	PDURFH	5,317	1.50"	80-200

PNURFH & PDURFH:

AMCA International
Licensed

PDURFH

Wall Mount Centrifugal: Hurricane Rated

PNURFHW & PDURFHW

PNURFHW belt drive and PDURFHW direct drive fans are wall mounted, centrifugal power ventilators designed for exhausting clean air in high wind and hurricane resistance applications.

Drive	Model	Max CFM	Max Static Pressure	Model Sizes Available
Belt	PNURFHW	14,622	5"	80-300
Direct	PDURFHW	5,317	1.5"	80-200

PNURFHW & PDURFHW:

PDURFHW:

Centrifugal Utility Blower: Hurricane Rated

3000H & 8100H

Belt drive 3000H, 8100H, and QBRH and direct drive QBRDH are utility sets designed for high efficiency and low sound output in high wind and hurricane resistance applications.

3000H and 8100H available in:

- Class 1 or Class 2
- Clockwise or Counterclockwise Rotation
- 7 discharge positions

QBRH and QBRDH available in:

- Clockwise or Counterclockwise Rotation
- 7 discharge positions

QBRH & 8100H:

Smoke Exhaust Fans

U.L. 705 Listed

**500°F for 4 hours
1000°F for 15 minutes**

Acme's smoke exhaust fans are designed for life-saving smoke exhaust management under severe temperatures.

These units are intended for installation in buildings in accordance with requirements contained in the Recommended Practice for Smoke Control System, NFPA 92A; and are intended to be connected to and controlled by Listed Smoke Control System Equipment (UUKL).

Stainless Steel Tubeaxial Fans

Belt-Drive Stainless Steel Tubeaxial Fans

The HAS fan is a belt drive, tubeaxial exhauster with the motor, drives and bearings located outside the airstream. Stainless Steel Tubeaxial fans are industrial strength and built for harsh applications, which may include water treatment facilities, food processing, chemical processing, and other applicable commercial or industrial applications with moisture-laden or corrosive environments.

- Corrosion resistant, 304 stainless steel
- Maximum inlet air temp.: 200°F
- Maximum ambient air temp.: 104°F
- Installation must comply with all local and national safety codes including the National Electrical Code (NEC)

Options and Accessories

- Stainless steel belt guard or motor/weather cover
- Stainless steel companion flanges
- Stainless steel guards
- Isolators
- Disconnect switches

DESIGN FEATURES	BENEFITS
Exhaust or Supply	Flexible to application
May be ducted, non-ducted, or rooftop mounted	Diversity of installation
May be installed vertically or horizontally	Versatile operation
Stainless steel, precision balanced propeller	Corrosion resistant
Pillow block bearings are rated at an L ₁₀ life of 200,000 hours	Long lasting
Heavy gauge, stainless steel housing, belt and bearing covers, shaft fasteners and motor mount	Corrosion resistant, rugged design

TURN UP YOUR EFFICIENCIES WITH ACME'S EC MOTORS

ELECTRONICALLY COMMUTATED MOTORS

Meet your energy savings requirements with the new, electronically commutated motors that maintain 85% efficiency even as the motor is slowed down.

Electronically Commutated Motors can be turned down by 80%. An EC Motor contains permanent magnets on the rotor thus the magnetic field does not have to be generated as in an induction motor. This results in increased efficiency especially at lower speeds. These motors are available in a direct drive configuration on Acme's upblast, downblast, panel, square inline, vaneaxial, and centrifugal fans.

Direct Drive Centrifugal Utility Set

Model QBRD is a direct drive centrifugal utility set designed for high efficiency and low sound output.

The QBRD utility set is a medium duty fan available in four sizes with capacities up to 5,100 CFM and up to 3.25" static pressure. Maximum operating temperature of the QBRD is 250°F. The QBRD's compact design allows quick and easy installation in equipment rooms or on rooftops for exhaust or supply applications.

Fan housing is made of heavy duty steel with lock formed construction. All steel components are coated with ACME-SEAL Polyester Powder Coat.

Model QBRD has a 2 year limited warranty (including motor).

Options and Accessories

- Aluminum construction
- Dampers
- Weather cover
- Housing drain 1.5" or 2"
- Vibration isolators
- Inlet guard/outlet guard
- Outlet flange
- Spark resistant construction (AMCA B)
- Grease trough
- NEMA 1 or NEMA 3R disconnect switch
- EC motors (electronically commutated motors) available
- Speed controls: single or 2 speed - EC motors only

Design Features

Exhaust or supply
Field rotatable to any of seven discharge positions
EC motor available
Designed for low sound output

Benefits

Flexible to application
Broad range of installation
Superior efficiency
Quiet operation

MODEL PVD

Introducing...

Acme's new direct drive centrifugal downblast fan Model PVD. This exhaust fan transforms Acme's best selling belt drive model PV into a direct drive fan that can offer improved performance ranges to meet your customers' demands. Model PVD also extends the range of the direct drive PRN downblast rooftop exhaust fans.

- Current sizes PV120D up to PV200D
- Max CFM increased from 2,770 to 6,062 at 0" SP when compared to Model PRN
- EC motors (electronically commutated motors) can meet your energy saving requirement and maintain 85% efficiency at all speed ranges
- Single phase and three phase EC motor technology available (EC motors also available on the PRN)
- 1/2 HP to 2 HP available in 115/208/230 single phase and 2 HP 208/230/460 three phase
- Expanding to VFD controllable motors
- 2 year limited warranty (including motor)
- New sizes being added to FANtastic!® soon

ACME SYNC DRIVE

Hybrid VFD for belt or direct driven fans

Plug and Play...

No Programming Necessary!!!

Mounted or Not Mounted

Standard Features:

- Potentiometer dial for speed control
- 0-10V input or 4-20mA
- Compatible with ACME-SYNC controllers
- 24V damper output control with built in time delay
- Two color LED with either a fast or slow single blink code for faults
 - o Fault notifications include fault under/over voltage, input phase loss, over current, over heat, short circuit protection, hardware error and cooling fan error on models with cooling fan
- Thermal Overload (TOL) protection
- Does not require filtering technology to meet IEEE 519
- Acme Sync Drives are designed and assembled in the USA

Housing

- Rugged die-cast aluminum with painted exterior for additional protection
- NEMA 4X Enclosure / IP65
